o Among most powerful calamities which ever struck to mankind in its journey to safe, secure and comfortable life, Covid-19 caused by corona virus tops the list. No calamity ever brought the world to knees in such a short span of five months. Devastation of world economy and disruption of normal life of this scale by any infectious disease has never been witnessed in human history. Spread of the disease has been so fast in different parts of the world that within two months of its first outbreak, WHO recognized it as a pandemic. Rising infection and death toll of covid-19 has sent shock waves in the spine of governments across the globe. People are scared, authorities are clue less, health professionals are overworked and world economy has been sent in doldrums.

o The novel corona virus, SARS CoV-2, the new demon has struck havoc in all countries of the world whether rich or poor, as there is no treatment or vaccine available so far to tame it. Spells of lockdown imposed by most governments as control measure has proved crucial in controlling rate of its transmission. Since disease spreads from person to person by inhaling salivary droplets and by contact of contaminated surfaces, imposition of lockdown delayed the transmission rate and gave authorities breathing space to boost and upgrade their health infrastructure for management of disease. It has affected all walks of life and every sector of economic activity, and has also forced us to change the way we go to our businesses. Appropriate changes in our work culture, life styles, food habits, value systems and everything we do is required to survive and flourish in the post- Covid era.

o Covid-19 is the most compelling challenge at the moment and people of every walk have to decide how their sector and discipline can progress in the light of this new threat. Present webinar is being organized to explore the ways of coping with the challenges posed by SARS CoV-2 in the sectors of health and education. Ensuring delivery of health services and quality education has become a challenge, as both these sectors so far involved close interactions between the service provider and the beneficiaries, which now has to change. The webinar will hopefully show the way out of this crisis and might help authorities in formulating policies for the normal functioning of the health and education sectors.

National Webinar on Impact of Covid-19 Pandemic on Health & Education

DATE
08 June 2020
Monday

10.00 AM Onwards

PLATFORM
Zoom
